Low platelets in infants can have a variety of causes and multiple effects. The clinical name for low platelets is thrombocytopenia and indicates a platelet count of less than 150,000 per microliter of blood. Many babies, especially those who are in a neonatal intensive care unit NICU, can have petechiae. Petechiae is a sign of a disease related to low platelet count thrombocytopenia. It can also occur if extreme pressure is applied to the tissues such as in excessive vomiting, tourniquet application, or in too much coughing. Read about idiopathic thrombocytopenic purpura ITP symptoms like red spots on the skin, purplish bruising, nosebleeds, bleeding gums, blood in the urine or stool, fatigue, and low platelet count.
